

CUSTOMIZE Your Industrial Hearing Conservation and Training Programs

E.A.R./Insta-Mold, Inc • P.O. Box 18888 • Boulder, CO. 80308 • U.S.A.

CUSTOMIZE Your Industrial Hearing Conservation and Training Programs

About E.A.R., Inc./Insta-Mold. We have been in business for over 40 years, working with medical, audiological, recreational, industrial safety, military and security groups. Insta-Mold manufactures its own silicones and maintains its own research lab and development staff.

Companies who have benefitted from our industrial Hearing Conservation and Training services include: Chevron, British Petroleum, Union Pacific Railroad, Alcoa, Reliant Energy, PacificCorp, Ball Metal, Tyco and many others.

E.A.R., Inc. is GSA Compliant

CUSTOMIZE Your Industrial Hearing Conservation and Training Programs!

3 Ways E.A.R.Inc./Insta-Mold can help you meet the goals of your Hearing Conservation Program . . . and save you money!

With over 40 years experience and a full line of globally marketed hearing protection and enhancement products, E.A.R.Inc./Insta-Mold can fit your employees with customized hearing protection and/or train your staff in the correct procedures for doing future fittings.

OPTION 1: E.A.R. Fitting Teams at your site.

E.A.R. Inc. can provide a certified fitting team **WORLDWIDE** to fit your employees for custom hearing protection on-site as designated by your safety team and management. This option is best for companies with 75 -100 employees per location. To minimize costly time away from the job, fitting time is usually less than 15 minutes per employee.

OPTION 2: Fitting and Training at your site.

As in Option 1, E.A.R., Inc. sends a fitting team to your site. When your designated number of employee fittings are complete, E.A.R., Inc. trains your medical/safety team in the proper procedures to fit remaining employees with custom hearing protection and/or modifying the protection with filters, or for radio communications, iPods™, etc. Training at your site includes the same topics covered in our Boulder facility.

OPTION 3: Training at our Boulder, CO facility

One-day seminars are held at our Boulder facility and are charged according to the number of people attending. Topics include:

- Types of silicone & their applications
- NRR (Noise Reduction Ratings)
- Product Safety Data Sheets
- CE Numbers for European compliance
- Hands-on procedure for making custom hearing protection on-the-spot and/or modifying molds for other applications.

For a complete outline of seminar topics , e-mail info@earinc.com.

How Insta-Mold™ Custom Hearing Protection Can Save You Money

Insta-Mold™ custom ear plugs will reduce the amount a company spends annually on hearing protection requirements. With a lifespan of 2-4 years depending on use, working environment and employee care, Insta-Molds have benefits beyond hearing protection. When compared to the widely used disposable earplugs costing 20¢ to 35¢ per pair, in the first year, Insta-Molds can save a company approximately \$3,100.00 per 100 employees!¹ Savings really start to add up when E.A.R., Inc. has trained your staff to do additional fittings. This has been an ongoing E.A.R., Inc. benefit enjoyed by companies and service providers **WORLDWIDE**.

¹For complete facts and figures on this cost comparison, see www.earinc.com/p1-nonelectronic-instamold-ind.php.

For food industry applications, we can add a small metal ball into the silicone that can be picked up by metal detectors.
